

Termite Treatment Information

In order to ensure the safety of our technicians, we complete a PA One Call Notification, which notifies the public utility companies to physically mark any public buried lines/objects that may be near the structure we are scheduled to treat. Please be aware that you may be seeing utility workers on your property, typically a day or so before the scheduled treatment date.

We only use Termidor brand termiticide. We do not use any generics. We apply Termidor termiticide into the soil (referred to as trenching/rodding) around the entire perimeter walls of the structure to create a continuous barrier of protection.

Wherever concrete, wood decking or patios meets the foundation, as in an attached garage, deck or patio for instance, we drill holes through the concrete/paving/decking material in order to inject the termiticide. All holes are then filled and sealed. Any material that borders the foundation wall needs to be drilled.

For all interior termite activity, the wood may also be drilled and treated with foam termiticide.

Every home is unique. This is a general description of what can be expected during a subterranean termite treatment. There may be additional techniques utilized depending upon construction of each structure.

Our service treats the infestation of subterranean termites. We do not do wood repair, nor do we claim any expertise in damage evaluation. Should anyone have any concerns regarding visible damage reported, we strongly suggest that you hire a qualified building contractor of your choice, to determine the degree and extent of damage, including any hidden damage that may exist.

Renewable & Transferrable Service Warranty:

With every treatment that we perform, we issue a one year renewable, transferable service warranty. In order for the service warranty to be transferrable to a new owner, all that we require is notification of the sale of the property, the name, phone contacts, and address of the new owner(s). There is no charge to transfer the warranty to the new owner.

General Information for Termite Treatment

- If it rains heavy and saturates the soil, work may be re-scheduled for another time, depending on weather. And we may not know that until the day of treatment. Sometimes we can do the inside work and reschedule the outside work for another time!
- We would like to be able to back the truck into the driveway to be close to the house.
- If there are indoor areas that need to be treated, we need everything pulled away from the walls about 3 feet. Also, please move patio furniture or other large items away from the house side walls. Our insurance company forbids us from moving furniture.
- It will be noisy at times. If it is too uncomfortable, some of our customers prefer to leave shortly after our arrival.
- We need access to water and electricity.
- Our technicians clean up after the job is completed if it is called for.
- There are not any “fumes” or “toxic odors” to be concerned about.
- Our technicians may be in and out of your home many times during treatment.
- Please provide the best possible access door.
- Please do not hover near the technicians. Allow them ample space to do their job!
- Please be careful of extension cords and hoses that we temporarily stretch out. Please don't drive over the hoses to equipment.
- We like animals, but please keep pets away from technicians while we work.
- We do our work quickly and thoroughly. There is at least an hour or so of preparation at our office before we arrive at your home.
